<https://luke.geek.nz/>

IDC predicts that by 2027, 90% of organizations will feel the pain of the widening IT skills shortage, costing some \$5.5 trillion globally in losses caused by product delays, impaired competitiveness, quality issues, missed revenue goals, and declining customer satisfaction.

- Organizational skill gaps are growing, too. To narrow the delta between the skills that companies need and the skills their people have, **organizations must shift toward skills-based hiring and a way to validate those skills.**
- If there's a silver lining, it's that **online training platforms and courses are increasingly popular**, driven by remote and hybrid work realities.
- **Coupling full role-based credentials with scenario-based credentials** can ensure that organizations have the necessary skills to remain competitive.

Where to Start?

Security, cloud solutions, and AI are among the most in-demand skills. Respondents say they are also among the hardest to find and train for.

Credentials Matter

Organizations and their employees derive strong benefits from credentialing, whether it takes the form of full credentials or via micro-credentials.

How important is it that candidates for technical positions have credentials?

More than **70%** of organizations believe **industry-recognized credentials are essential or very important tools for skills training.**

Certificates have not only changed not only my career but also my life. Just getting the certs is not enough. You have to keep current and practice to stay relevant. Without all the work, certs are just "a piece of paper". And that's how it changed my life. I now read blogs, learn, whitepapers and books.

Webinars are great, I attend as often as possible, it's a good way to see the emerging trends in any industry.

It helped me change my career to the Tech industry. That and a portfolio & blog.

It helps to proof to your potential employer you are qualified, but does not replace you showing that you're qualified of delivering in the said position.

That's my opinion on certification, it's a nice to have, but don't stop there, keep on yourself in the new technologies.

Microsoft and the growth mindset

"Don't be a know-it-all.
Be a learn-it-all."

Satya Nadella, CEO, Microsoft

A great quote from Satya Nadella that shows how Microsoft embraces the growth mindset approach. Simple and clear communication is important for instilling lasting changes

Fixed Mindset vs Growth Mindset

Introduction

Sharpening your team's cloud skills begins here

Achieve your goals with the freedom and flexibility to build, manage, and deploy your applications anywhere. Use your preferred languages, frameworks, and infrastructure—even your own data center and other clouds—to solve challenges large and small. With help from Microsoft Azure, you have everything you need to build your next great solution.

[Microsoft Learn](#) supports IT pros, developers, and data and AI professionals to get the skills they need to cover all the aspects of digital transformation—managing on-premises, hybrid, or cloud infrastructure; innovating with the best-in class applications; and supporting apps and infrastructure with data and analytics, all with the proper security considerations.

The right journey leads to long-term growth

A map for the next milestone

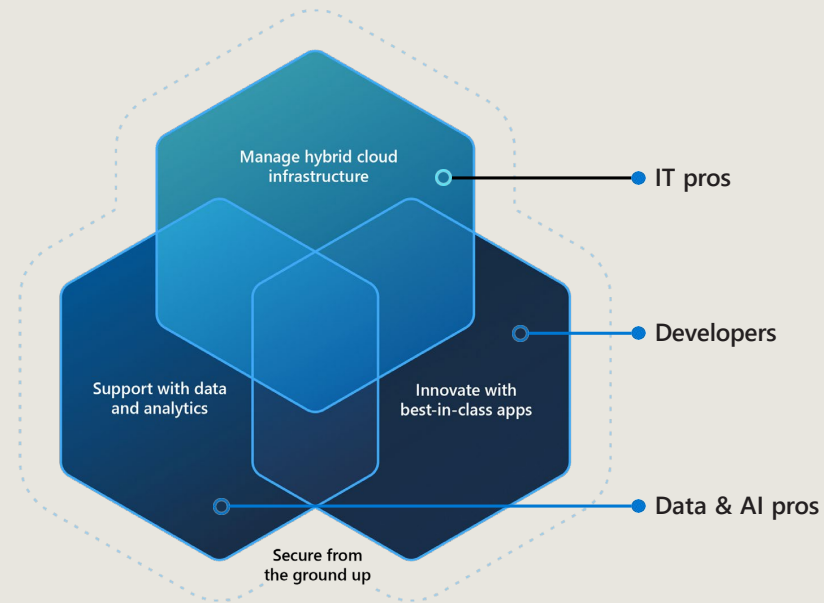

Use this guidebook to discover the recommended journey for you or your team. The following pages describe the recommended tracks learners can take to receive the maximum benefits of Azure training and certification.

Master the basics and beyond

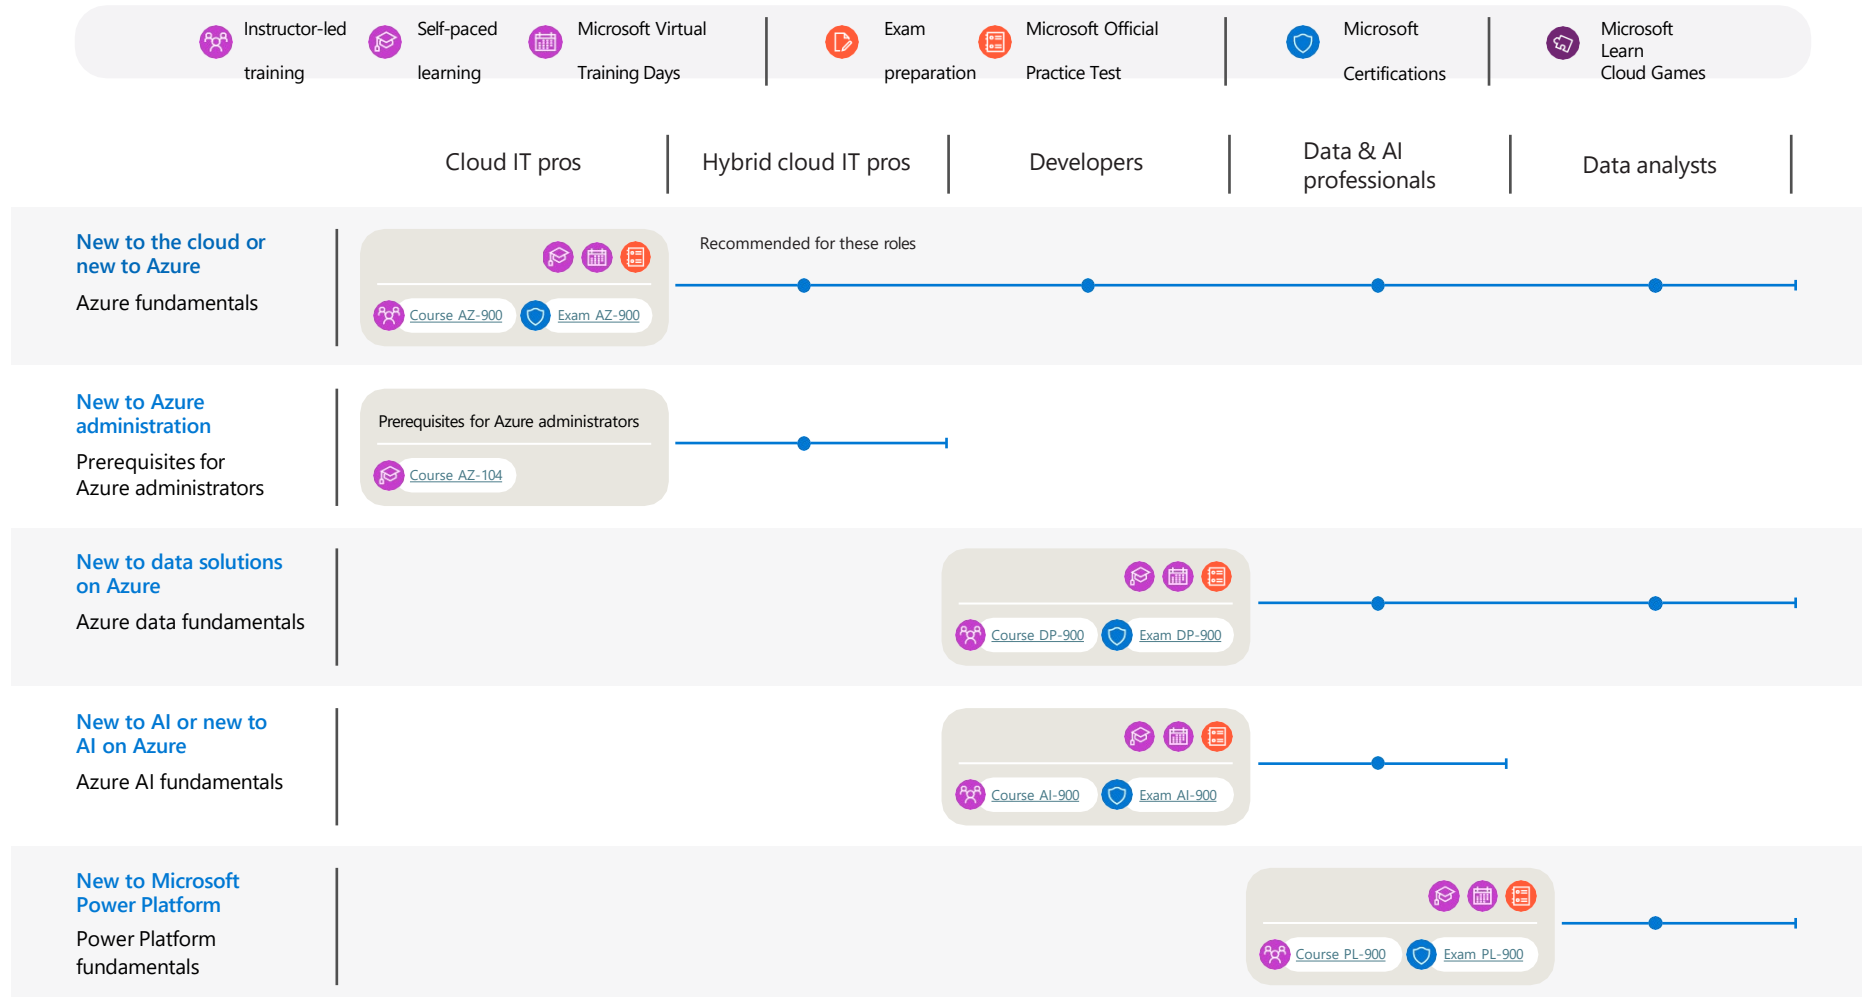

Each journey is designed to help managers and learners identify where to start and where to go based on their specific role or projects.

Everything you need in one place

After determining which journey is the right fit, find courses, training opportunities, and other important information that sets you or your team up for success.

Microsoft Virtual Training Day events

- These are in-depth, virtual training events that guide you toward the many possibilities for career and organizational impact today and tomorrow. With weekly events to match every skill level, they offer an opportunity to grow your technical skills and to gain the confidence to navigate what's ahead.

- **Microsoft Azure Virtual Training Days**

- **Azure Fundamentals** > aligned to Exam AZ-900 skills
- **Azure AI Fundamentals** > aligned to Exam AI-900 skills
- **Azure Data Fundamentals** > aligned to Exam DP-900 skills
- **Modernize .NET Apps** > recommended for Azure developers
- **Linux OSS Database Migration** > recommended for Azure database administrators
- **Migrating On-Premises Infrastructure and Data**
> recommended for Azure database administrators
- **Azure Virtual Desktop**
> recommended for Azure Virtual Desktop administrators
- **DevOps with GitHub** > recommended for DevOps engineers
- **Well-Architected** > recommended for Azure solution architects
- **Deliver Integrated Analytics with Azure Synapse**
> recommended for Azure data engineers
- **Implementing Hybrid Infrastructure**
> recommended for Windows Server hybrid administrators
- **Cloud Native Apps** > recommended for Azure developers
